

About Bonded Lightning Protection

Bonded is one of the largest lightning protection companies in the United States, and has been serving the Southern US for more than 50 years. Bonded Lightning Protection is Underwriters Laboratories, Inc. listed, a member of the Lightning Protection Institute, and a member of the United Lightning Protection Association.

Compliance Counts

Lightning protection installation is a specialty discipline. To ensure that your lightning protection system is installed properly, it is important to hire an experienced lightning protection specialist. Nationally recognized safety standards for lightning protection system design and installation are maintained by the National Fire Protection Association (NFPA 780) and Underwriters Laboratories, Inc. (UL96A). These standards are designed to help ensure safe, effective protection from lightning.

Quality Starts with Materials

Bonded Lightning Protection is the leading installer of quality, UL Listed lightning protection components. Bonded's products are UL Listed for lightning protection. UL inspects a large majority of our installations and provides a UL Master Label Certificate of Inspection as a third party testing company. All products used in your Bonded Lightning Protection installation meet or exceed the requirements for lightning protection established by the National Fire Protection Association.

Design and Consultation Services

Our national network of representatives provide design, specification and consultation services to assist you with specific needs. When questions arise about lightning protection, remember that Bonded Lightning Protection is the leading resource for quality products, installation and accurate information.

Inspection and Repair

Even a properly installed lightning protection system requires maintenance. Modifications to a structure, damage to the system due to wind, reroofing, etc. can damage the system or require changes be made to retain optimal protection. Bonded is available for periodic lightning protection system inspection and repair.

Our Mission

Our mission is to protect every vulnerable structure from the potential damage from lightning.

Lightning Protection

Protect your investment.

The Problem

Each year lightning destroys more property and causes more injuries than hurricanes, floods, and tornadoes. Lightning can damage a building's structure, electrical systems, destroy sensitive electronics and cause serious fires.

You can protect your home and family with a professionally installed system that not only makes your home more valuable, but more beautiful as well.

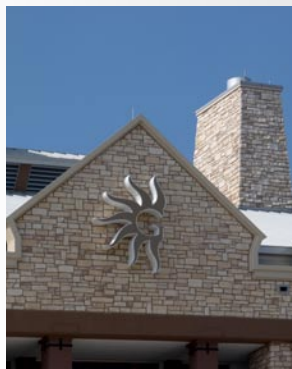

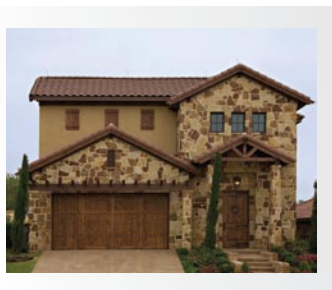

The Solution

A professionally installed lightning protection system is the only method recognized by the National Fire Protection Association, Underwriter's Laboratories, Inc. and Lightning Protection Institute to protect valuable property from damage caused by lightning.

Residential . . .

Today's homes are especially vulnerable to lightning. Metal building components, irrigation and security systems, computers and sensitive electronic appliances are common. These lightning sensitive features can increase a homeowners potential for serious lightning damage. The security and peace of mind that a lightning protection system offers is a big return on a small investment.

. . . or Commercial

Many industrial and commercial property owners are choosing lightning protection systems for their structures as part of the overall security package to protect property, inventory, electrical equipment and precious human life.

Proven Service

For over 50 years Bonded Lightning Protection Systems, Ltd. has been the leading installer of code compliant lightning protection and grounding systems. From our Master certified Designers, which are accredited through the Lightning Protection Institute, to our outstanding Sales team and on to our Field Installers, we strive to provide the best customer service possible. Quality counts in lightning protection systems, so why not have the best? Call Bonded today for all of your lightning protection questions or concerns.

When you call, ask about other structures that Bonded can protect. You might be surprised about what you learn.
